## Welcome to Denver's Second Annual Amputation Prevention Summit

This educational event will highlight the urgent nature of the diabetes epidemic, specifically the prevalence of PAD and diabetic foot ulcers/injuries. It will also discuss ways healthcare professionals can improve their practices in order to reduce lower extremity amputations.

Diabetes is among the top ten leading causes of death in Colorado, and the leading cause of non-traumatic lower extremity amputation. In the state of Colorado, the lifetime healthcare cost for persons with a lower extremity amputation is estimated to be more than \$500,000.

Between 2003 and 2014, the prevalence of diabetes in our state increased by 55 percent and in 2014, upwards of 500,000 adults in Colorado were living with diabetes.

With the future incidence of diabetes projected to rise to 550 million people worldwide by the year 2030, the concept of limb salvage has become an international and national trend.

Persons with diabetes have a risk of a leg amputation that is 15-40 times greater than for a person without diabetes. Within two to four years of unilateral limb loss, one-third of all patients lose the other leg. Sadly, only about 50 percent survive within five years following a leg amputation.

Join us for this educational event, as thought-leaders present important data, current trends in limb salvage and best-practices in the battle against diabetes-related complications.

## Target Audience

This program is designed to address the educational needs of those clinicians that frequently interact with patients at risk for major amputation due to complications of diabetes and peripheral artery disease. The target audience includes physicians from the fields of podiatry, vascular intervention, internal and family medicine, infectious disease, plastic surgery, as well as nurses from various care settings including home health, post-acute care, outpatient clinics and inpatient care.

## Lecture Topics Include

- Who's at risk for an amputation?
- How do I screen for peripheral artery disease (PAD) and what treatments are available?
- Understanding venous disease and treatments
- Determining wound etiology and choosing an approach
- How does debridement work and what type should I choose?
- What are the roles of various dressings in wound healing?
- What is the role of hyperbaric oxygen in wound healing and other indications?

## Agenda

<p><b>7<sup>30</sup>-8<sup>00</sup> AM</b> Registration and Breakfast</p> <p><b>8<sup>00</sup>-11<sup>00</sup> AM</b> Lectures</p> <p><b>11<sup>00</sup>-12<sup>00</sup> AM</b> Panel Case Presentations</p> <p><b>12<sup>00</sup>-1<sup>00</sup> PM</b> Lunch</p>	<p>•••••</p>	<p><b>1<sup>00</sup>-2<sup>25</sup> PM</b> Lectures</p> <p><b>2<sup>25</sup>-4<sup>20</sup> PM</b> Hands-On Labs</p> <p><b>4<sup>20</sup>-5<sup>30</sup> PM</b> Panel Case Presentations</p> <p><b>5<sup>30</sup>-6<sup>30</sup> PM</b> Reception</p>
